

## Broken Britain Index - Technical Appendix - December 2023

This appendix sets out the methodology and data sources employed in creating the Broken Britain Index.

### Objective

The Broken Britain Index was designed to identify the areas most severely affected by the simultaneous decline of multiple public and essential services.

### Indicators used in the index

## **Standardisation and ranking**

To ensure comparability across indicators, we standardised each indicator using the min-max method, which scales each indicator to a common range between 0 and 1, before combining them into a composite index.

This method normalises the data distribution better than just ranking as the scaling reduces the impact of outliers whilst preserving information allowing for a more nuanced view of the distribution.

## **Lower tier local authorities**

We collected our data based on lower tier local authorities in England.

We did not include data for the City of London or the Isles of Scilly due to data constraints due to the size of these local authorities.

For some of the NHS data we used *NHS Acute (Hospital) Trust Catchment Populations* to understand the main hospital trust that served each local authority as hospital providers do not have defined boundaries for access to their services. The source data is available [here](#) from official 2022 data from the Office for Health Improvement and Disparities.

## **Combining different indicators**

We chose to assign equal weights to each indicator, considering that the inclusion of more health and education indicators adequately emphasised these areas.

To validate the robustness of our index, we created multiple versions with varying weightings for each indicator. The results demonstrated no significant impact on the final rankings or the trends identified within the index.
